

Zozo Whitepaper

Zozo: The Soul of Meme Coins

Introduction

Zozo is not just another meme coin; it is the spirit of all meme coins combined. Built on the Binance Smart Chain (BSC), Zozo aims to create a secure, community-driven, and fair ecosystem where investors can safely trade without the fear of sudden market manipulations.

Tokenomics

- Total Supply: 1,999,999,999 ZOZO
- Transaction Rewards: A portion of each transaction is distributed among holders.
- Burning Mechanism: Every six months, a certain percentage of tokens will be burned to reduce supply.
- Purchase Limit: Each wallet can buy a maximum of \$5 worth of ZOZO per transaction to prevent whales from manipulating the market.

Why Zozo?

Unlike other meme coins that started as jokes, Zozo was designed with a purpose: to empower small investors. Our vision is to create long-term value for holders by ensuring fair distribution, strong community involvement, and a secure trading environment.

Roadmap

1. Phase 1: Token Launch & Community Building
2. Phase 2: Listing on Exchanges & Marketing Expansion
3. Phase 3: Implementation of Payment Features for Real-World Use

Security & Fairness

Zozo's smart contract is designed to prevent large dumps and ensure a healthy market environment. The project operates with complete transparency and has no centralized ownership.

Future Developments

- Airdrop Program: An upcoming system to reward early adopters.
- Referral System: Users will be able to invite others and earn rewards.
- Leaderboard: Displaying top holders in the community.
